

Race Manager — Getting Started

Sep 30, 2026 · [Tamiya Race Manager on GitHub](#)

Everything you need to run your first race night, in order. Allow about twenty minutes the first time; after that, a race night takes no setup at all.

1. Install it

There is nothing to install alongside it. No Python, no internet connection, no admin rights.

Windows. Run `TamiyaRaceManager-Setup-<version>.exe`. Windows will warn you about an unrecognised app — click **More info**, then **Run anyway**. That warning is normal and appears because the app is not registered with Microsoft. You get a desktop icon and a Start Menu entry.

Mac. Unzip the download, drag the app to your Applications folder, then **right-click it → Open → Open**. A plain double-click will be refused the first time, and macOS may claim the app is damaged. It is not. You only do this once.

After that, every race night is just a double-click.

Moving to a different computer? Install the app there, then use **Export Data** on the old machine and **Import Data** on the new one. Your racing does not live in the app folder, so copying the app across does not bring your results with it.

2. Set up your season

You do this once a year, not every race night.

1. Open the app and click **+ Start New Season**.
2. Give it a name and a start date — for example *2026 Season*.
3. Add your racers. Go into any class setup screen and type each name into the entry box. You can paste a whole list, one name per line.
4. Set each racer to **ADL** or **JNR**. Junior status is remembered, so you only set it once.

Racers you add now appear in the **Season Roster** on every future race night, ready to tick off. You never have to type a regular racer's name twice.

Only one season can be active at a time.

3. Run a race night

You do all of this once per class, so three times on a normal night: Box, then EVO, then Pro.

1. **Pick the class** from the home screen.
2. **Add tonight's racers.** Tick names in the Season Roster on the left. Anyone new can be typed into the entry box.
3. **Double points?** Toggle **×2 PTS** in the Tonight's Racers panel *before* you start. You cannot change it afterwards.
4. **Click Start Race.** You need at least three racers. The app draws the bracket for you.
5. **Run the races.** For each one, click 1st, 2nd and 3rd, then **Confirm Result & Next Race**.
6. **The Final** is assembled automatically once one racer is left undefeated and two have come through the second-chance bracket.
7. **Click Save Results & Return Home.** Check the podium looks right first.

Then start the next class.

Two things worth knowing before you need them

- **Someone not ready?** Click **Swap Race** to run a different heat first and come back to it.
- **Put a result in wrong?** Click **Edit Last** straight away — before you confirm the next race. That is the only race you can change.

Putting it on the big screen. Click  **Display** on the home screen before racing starts, so the projector is ready. It shows "Waiting for racing to start" until the first heat begins.

4. At the end of the night

Once the last class is saved, do one thing before you pack up:

Plug in a USB stick and click  Backup to USB.

That is it. One click, and tonight's racing is safe off the machine.

Everything else looks after itself. The app saves as you go, and it writes a dated copy of the whole database to `C:\Tamiya\Backup_DB` every time you close it.

The backup guide covers what all of that means and how to get a night back if you ever need to.

5. If something goes wrong

What you see	What to do
Windows warns about an unrecognised app	More info → Run anyway . Normal on first launch.
Mac says the app is damaged	Right-click the app → Open → Open . Only needed once.
You put a race result in wrong	Edit Last , before confirming the next race.
The app closed mid-night	Reopen it. It offers to resume the race you were running.
You need last week's results back	Import Data and pick a file from C:\Tamiya\Backup_DB .
The app opens but nothing loads	Another program is using port 8765. Restart the computer. Rare.

If none of that fits, the app writes a log to `%LOCALAPPDATA%\TamiyaRaceManager\app.log` . Send that file on and it usually says what happened.

Your racing is safer than it feels. It is stored outside the app folder, so updating or reinstalling the app never touches it, and there are three separate backups behind it.
